

KAHLE TECHNOLOGIES

Moorpark, CA.

March 22, 2020

Kahle Technologies is reaching out to help during the COVID-19 Global Pandemic. While many in the water treatment community cannot be released to work, or are in the unfortunate position of being swept up in quarantine or even fighting this thing personally, some of the critical instrumentation that needs to be attended to cannot be taken care of. I would like to offer to remotely help your staff perform critical repairs or maintenance via Facetime for iOS users or via the Zoom platform. With over 35 years of working in Plant Chemistry and its associated instrumentation, I can help your staff understand what is needed to return critical instrumentation to a reliable state of operation.

I have over 25 years of experience in Plant Chemistry remote monitoring experience, and have done this before and will be able to help your personnel by being the eyes and experience, while your personnel's hands can do the service locally that is needed. I am offering this service at any schedule that meets the needs of your company's timing. Since this is done remotely via a teleconferencing model, very little is needed to make this happen.

For the next few weeks, I will be offering this service for half the price of on-site servicing in 1-hour increments at \$75 USD/hr. This can be done via special arrangement of Emergency Purchase orders or by credit card if need be.

I feel strongly that company's that can reach out to be of service during this critical time certainly should and this is my response to keeping the critical infrastructure of the world that we operate in and serve moving forward. This service is being offered anywhere in our Global community as it can be offered by regulation.

Please let me know how I can be of service, and please know that my thoughts go out to you and your staff.

Roger Kahle
